Integra Introduces Striking New Arm Design to its Kallise Lounge Collection

Integra Inc., a leading designer and manufacturer of high quality seating and tables for commercial environments, is introducing updates to its Kallise Lounge Collection.

Kallise is defined by its residential-scale and a modern, mid-century aesthetic. This on-trend design makes Kallise an ideal and versatile seating solution for a variety of commercial spaces, including education, healthcare, hospitality and corporate settings.

The new wood arm design is a striking addition to the collection. The BeechBlock arm material is made of 3mm wood layers, which are parallel - or cross-laminated - for exceptionally high strength at slimmer dimensions compared to softwood materials. BeechBlock was chosen for its high surface quality with inherent imperfections that patinas with age; the striated layers of wood are a striking and bold visual. The inset “pencil tip” leg design lightens the scale of the chair without sacrificing durability. The upholstered arm panel option combines the warmth of wood with the comfort of fabric.

PRODUCTS

BeechBlock is also available on all square and rectangular tabletops in the collection to beautifully coordinate with the arm design. In addition to the new wood arm, four upholstered arm styles are also available in lounge chairs, two-seat settees and three-seat sofas. The four upholstered arm designs come with a wide range of options

including: arm caps, wood and metal legs, casters, power, and tablet arms with cup holders.

Coordinating benches, ottomans, and tables round out this extensive collection adding even greater flexibility for designers and the environments they seek to create.

All seating products come with a range of

graded-in fabric options from the industry's leading textile manufacturers, providing virtually unlimited color, pattern and durability options.

Products in the Kallise Lounge Collection contain the strength and durability for which Integra is known. The Kallise chairs pass a 1,000 lb. drop test and a 2000 lb.

static load test. The tablet arm passes a 300 lb. drop test. Made with steel inner construction and featuring dymetrol suspension, Kallise seating products come with a lifetime warranty.

Kallise was originally introduced at the 2017 NeoCon Expo.
