

DESIGNING FOR BETTER LEARNING:

How Integra's Tablet Arm Advances Flexibility & Focus

At Integra, our commitment to improved learning through design is exemplified by our Tablet Arm option, a solution that enhances comfort, accessibility, and flexibility for learners of all ages. Recognizing that education today happens everywhere—from classrooms and libraries to lounges and multipurpose spaces—we developed a tablet design that integrates seamlessly across nearly all of our seating collections. This gives designers and specifiers the freedom to prioritize aesthetics without sacrificing functionality.

The Integra Tablet Arm is engineered to perform in demanding environments, with a 300-pound weight capacity that ensures durability and reliability over years of use. Its thoughtful design allows students and educators to engage more comfortably, supporting focus and productivity while adapting

to a variety of settings and teaching styles. By combining superior performance with versatility and design choice, the Tablet Arm underscores our mission: to create products that actively support better learning environments.

Whether in K-12 or higher education, the **Integra Tablet Arm** empowers designers to deliver flexible, functional solutions that improve the way people learn and collaborate.
